

Reports

1. Feature Overview

Operational and regulatory reporting. **Not implemented** — empty `com.bankone.report` ; sidebar item has no `routerLink` .

Status: Stub / Planned

2. Business Purpose

Summaries for management (deposits today, account status mix, customer growth).

3. User Workflow

Planned: Sidebar → Reports → choose report → date filters → export.

4. Execution Flow

Planned: `ReportController` → `ReportService` aggregating repositories / SQL views.

5. Database Tables

None dedicated; will read `account` , `customers` , future `transaction` .

6. REST APIs

None

7–13. Controllers / Services / Repositories / DTOs / Entities / Utils / Config

None

14. Validation Rules

Planned: date range limits

15. Security Rules

Planned: MANAGER/ADMIN (and AUDITOR when activated)

16–18. Exception / Logging / Audit

N/A

19. Testing Strategy

When built: compare report totals to known deposit fixtures

20. Future Extension Guide

Block on Transaction ledger for money reports; until then only master-data counts (overlap with Dashboard).

Future Modification Guide

Requirement: Add “accounts by status” report

Item	Detail
Files	New <code>com/bankone/report/**</code> ; <code>SecurityConfig</code> ; Angular <code>features/reports</code> ; sidebar <code>routerLink</code>
Classes	<code>ReportController</code> , <code>ReportService</code> , <code>AccountRepository</code> (query/spec)
Methods	e.g. <code>accountsByStatus()</code>
Impact	Dashboard may reuse same service method

Call hierarchy (target)

`ReportController.accountsByStatus()`
↓
`ReportService.accountsByStatus()`
↓
`AccountRepository` (group by status)
